This screenshot shows the Microsoft Azure Compute Infrastructure Virtual Machines blade. On the left, there's a navigation menu with sections like Overview, Infrastructure, Virtual machines, Capacity + placement, Related services, Monitoring + Policy, Monitoring (Preview), and Policies. The Virtual machines section is currently selected. In the main pane, it lists three virtual machines: VM-Internal, VM-SIEM (which is selected and highlighted with a blue border), and VM-Web. Below the list, there's a note about viewing a new version of the browse experience. On the right, the detailed view for VM-SIEM is shown. It includes tabs for Overview, Activity log, Access control (IAM), Tags, Diagnose and solve problems, Resource visualizer, and a Connect section with options like Start, Stop, and Capture. The Overview tab is active, displaying the VM's essentials like resource group, status, location, and subscription information. The VM-SIEM is running in Central India (Zone 1) on a Linux (ubuntu 24.04) operating system with a standard B2ads v2 configuration. It has one associated public IP address (20.193.144.66) and is connected to a virtual network subnet named Hexaroot-VNet/Internal-Subnet. The health state is listed as '-' and it was created on 12/24/2025 at 7:25 PM UTC. There are also sections for Application security groups, Network manager, Settings, Availability + scale, Security, Identity, and Microsoft Defender for Cloud.
